Claims 1-6 are pending in this application which claims benefit of US Provisional Application SN 60/390,289, filed June 21, 2002.

Applicant's claims are drawn to a pesticide composition consisting essentially of one or more "minimum risk pesticides" and inert ingredients, which are explicitly disclosed on pages 2-3 of the specification. Among the minimum risk pesticides are: (sodium) lauryl sulfate and vegetable oils (claims 3, 4).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6 are rejected under 35 U.S.C. 102(a), (b), and (e) as being anticipated by Zobitne et al (US 5,998,484).

Zobitne et al '484 teaches the combination of cornmint oil (columns 1-2) and sodium lauryl sulfate, in combination with inert components such as mineral oil or water (col 3, lines 36-45), for the control of various insects.

Claims 1-6 are rejected under 35 U.S.C. 102(a) and (e) as being anticipated by Zobitne et al (US 6,548,085).

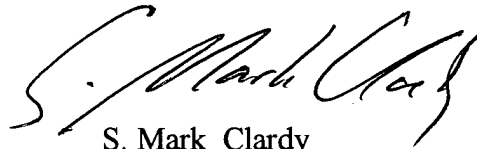

Zobitne et al '085 teaches the utility of various EPA deregulated oils, as well as sodium lauryl sulfate, as insecticidal agents in aqueous compositions (col 5, lines 5-15).
